## eConnect Hand Control

## eConnect Hand Control

### Push-Pull Brake-Accelerator / Push Brake-Radial Accelerator

Available as either a Push-Pull or as a Push Brake-Radial Accelerator, the new Veigel eConnect hand control is much easier to use than traditional mechanical systems thanks to its cutting edge electronic acceleration which allows you to experience your vehicle in a completely new way.

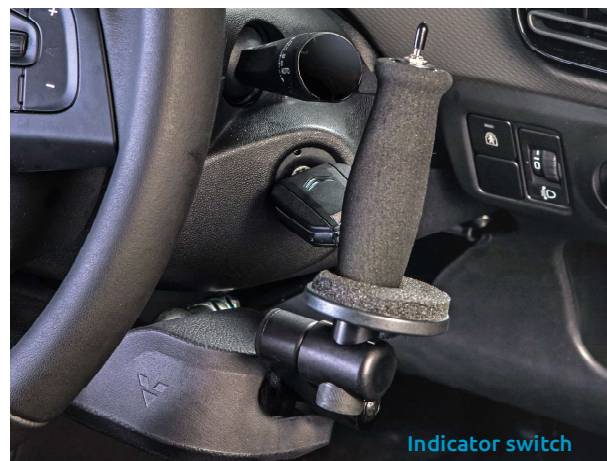

The reduced operational effort required coupled with an exceptional throttle response result in fatigue-free driving and the sleek and attractive design allows for more legroom and unhindered access to the OEM pedals for a driver not using the hand control.

All Veigel products meet the highest standards required from the automotive industry and are certified according to IATF 16949.

### Secondary Functions (optional)

## Indicator Switch

As an added option an indicator toggle switch can be integrated into the handle of the hand control. This makes it easier to operate the indicator functions particularly when a steering aid is also used. In many cases the indicator will self cancel as the steering wheel returns to the central position.

Indicator switch

## Features

- Easier to use - experience cutting edge electronic acceleration without delay
- Effortless and fatigue-free acceleration and braking
- Push-Pull or Push-Radial
- Ergonomic grip
- Brake bar runs inside the dashboard
- Sleek design for more legroom and space in the footwell
- Optional: Indicator toggle switch
- Veigel Quality: 100 % Made in Germany
- Available for a wide range of vehicles
- High quality, high- low- temperature resistant materials
